## THE YOUNG 3'S

### Inside the Classroom: Summertime

The past few months the classroom has been focusing on Ocean Animals. They took a field trip to the Aquarium and got a hands on experience looking at various fishes and animals. As we begin to approach June we know Summer is on its way. The classroom began discussing the beach and what activities can be done- Brian stated, "Build sandcastles at the beach". As an opening activity the children created a beach towel using various materials from papers, glitter, feathers, etc. In the next few months the class will focus on the change in weather by staying safe and protected with sunblock/bug spray, water activities, and the beach.

#### Parent Views:

To help enhance children's learning, we love to hear from families. What are some science activities that are related to summer/beach?
